

Technical Data

Adhesive Tape

Storage condition:

Adhesive tape should be stored indoors in normal temperature and humidity, despite adhesive itself lasts years, adhesive tape only lasts about 2 years. Because silicone used on the liner will transfer to the adhesive during time, which affects the adhesion.

Instruction: 1. Clean the surface before applying to keep adhesive tape from dust and dirt.

2. Apply 15psi※ pressure for a proper time (refer to table below) before loading.

The adhesion strength determined by adhesive type, shows below:

Adhesive type	Acrylic	Rubber
Feature	Low initial adhesion High ultimate adhesion Long-term durability	High initial adhesion Medium ultimate adhesion Moderate durability (approx. 2 years)
Time →	Initial 20 min. 1 day 3 days	Reach 100% strength immediately.
Strength →	20% 50% 90% 100%	

※psi - pound per square inch
